

Primary Nesting Sites of the Piping Plover, Least Tern, Roseate Tern, and Bald Eagle

This map indicates the landcover of Maine and distribution of primary nesting sites for four birds found in Maine: the Piping Plover, Least Tern, Roseate Tern, and Bald Eagle. The landcover layer was obtained in raster format from the USGS site. The bird nesting sites were all obtained from the Maine Office of GIS. The projection used is NAD 83 UTM Zone 19 N. The map was created in March of 2006 by Hilary H. Langer, a student in Environmental Studies 212 at Colby College in Waterville, Maine.
