February 25, 2015

This map shows deer wintering areas throughout the state of Maine in relation to Wildlife Management District boundaries. Deer wintering areas are defined by a forested area that deer use when (a) snow gets deeper than 12 inches in the open, (b) when deer sink into snow deeper than 8 inches in the open, and (c) when mean daily temperature falls below 32 degrees Fahrenheit.

Projected Coordinate System:
NAD 1983 UTM Zone 19N
Transverse Mercator projection

Data from the Maine Office of GIS.
