Predicted Lynx Habitat and Conserved Lands

Lynx (Lynx canadensis) potential habitat is merged with Maine’s conserved lands to visually display conserved lands within lynx range. Lynx potential habitat, accessed at geo.data.gov, was predicted through analysis of habitat, range limits, and sightings (Krohn et al. 1998). Maine conserved lands, county boundaries, and hillshade layers were accessed through the Maine Office of G.I.S., and the state and basemap layers through E.S.R.I.
