State of Maine
Abundance of Hospitals
in Populated Areas
Dominique V. Kone
Department of Environmental Studies
Introduction to GIS and Remote Sensing

This map represents the relationship between population density (people per km²) and the presence of hospitals within the state of Maine. The purpose of this map is to highlight the need for hospitals in the most populated areas. This map was compiled using Census Block (2010) and Hospital data layers from the Maine Office of GIS. Both data layers were projected in the North American Datum of 1983 Universal Transverse Mercator Zone 19N Coordinate System.
