School Enrollment and School Districts in the Belgrade Lakes Region

Megan Browning, March 2010
Environmental Studies Program, Colby College, Waterville, Maine

Map created at Colby College for the Environmental Studies Program using data from the Maine Office of GIS, ESRI93 and the U.S. Census Bureau. Census Bureau data are at a census block level and were used to calculate the number of people enrolled in school, from nursery school through high school. This is represented on the map in varying shades of brown. Darkest browns represent census block groups with the most people enrolled in school. Three sets of boundaries are included: Maine School Administrative Districts (MSAD), Community School Districts (CSD), and Individual School Administrative Units. Although the Belgrade watershed is highlighted in the map, note that boundaries extend beyond this border. The map is projected using NAD83, Universal Transverse Mercator Zone 19.

The Atlas of Maine is created by students in E5212: Introduction to Geographic Information Systems & Remote Sensing through the Environmental Studies Program at Colby College. The course is taught by Philip Nyhus, Assistant Professor of Environmental Studies. Additional assistance is provided by Dr. Manuel Gimond, GIS and Quantitative Analysis Specialist.
