# Atlas of Maine

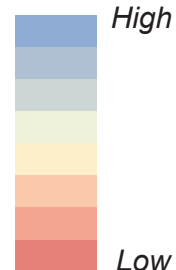

## Quality of Life by County

This map represents quality of life in Maine by looking at six data points for each county: education (percentage of residents with at least a bachelor's degree), median household income, unemployment rate, disability rate, life expectancy and obesity. Each value is weighted and formulated together to give the county a value. Each county's relative rank in these categories is compared to create an overall ranking amongst the 16 counties in Maine.
